

START HERE

Administrator User Guide

Prepare accounts, classrooms and academic data, then oversee attendance records.

Set up a class in this order: **accounts and classroom** > **course** > **course offering** > **timetable** > **student enrolments** > **reference faces when required**.

Before you start

You need an active administrator account, a modern browser, internet access and verified academic details. Coordinate classroom locations and approved reference photos with the institution.

[Open the web dashboard](#) | [Video walkthrough](#)

GET STARTED

Sign in and navigate

Your administrator role opens the administration dashboard.

- 1 Open UniAttend**
 Visit [the web application](#) and select **Continue with University account**.
- 2 Use your assigned account**
 Enter your university credentials on the sign-in page. Complete any password-change prompt.

Figure 1. Administration overview and the navigation sidebar.

Use the sidebar for **Users**, **Academic data**, **Corrections**, **Classrooms**, **Policies**, **Reports** and **Audit log**. On a narrow layout, point to a sidebar icon to reveal its label.

Overview is a summary

Check active users, classrooms and setup alerts here. Use the individual management pages to inspect and edit the underlying records. Sign out through the account menu when finished on a shared computer.

ACCOUNTS

Provision and manage users

Create an account with the correct role and university identifiers.

Provision account

Student Lecturer Administrator

Email Department

First name Middle name

Last name Registration number

Intake year Current semester

2026 1

Cancel Provision account

Figure 2. Student account provisioning form.

1. Open Users

Choose Students, Lecturers or Administrators. Use the available search to find an existing account first.

2. Select Provision account

Choose the role. Enter email, name, department and the fields shown for that role. For students, check the registration number carefully.

3. Submit and deliver access

Select **Provision account**. The temporary password is shown in the success dialog. Share it privately with the intended user before closing that dialog.

Change account access

Use **Deactivate** or **Activate** in the user directory and confirm the intended account. Search again to verify the resulting status.

Locked accounts

Locked is a separate sign-in issue after failed attempts. The directory status toggle is not an unlock control. Ask the identity maintainer for password or lockout help.

CLASSROOMS

Set up the classroom geofence

Use the actual classroom location before the lecturer creates a session.

Add classroom ×

Classroom code	Building
	Applied Sciences Building ▼
Floor	Capacity
Geofence radius (m)	Status
	Active ▼
Must be greater than 0.	
Latitude	Longitude
Between -90 and 90.	
Between -180 and 180.	

Cancel Save classroom

Figure 3. Classroom details and geofence coordinates.

Coordinate rules

Latitude must be within -90 to 90, longitude within -180 to 180, and radius must be positive. Choose the radius for the room; the demonstration radius is only an example.

An existing session keeps its boundary

Classroom edits do not move the geofence snapshot of an already created session. Correct the room before creating new sessions.

1. Open Classrooms

Select **Add classroom**, or **Edit** for an existing room.

2. Enter verified details

Fill the code, building, floor and capacity. Set latitude, longitude and the geofence radius in metres. Choose Active for a room in use.

3. Save and validate

Save, check the stored values and test the location with a real phone at the room before a class depends on it.

ACADEMIC SETUP | 1 OF 4

Create the course

A course defines the subject; an offering defines when and by whom it is taught.

Add course

Course code

Course name

Department

Credits

Status

Cancel

Save

Figure 4. Add course form.

1. Open Academic data

Select the **Courses** tab, then **Add course**. Check for an existing course before adding another.

2. Complete the subject details

Enter the course code, course name, department and credits. Choose the intended status.

3. Save and check

Select **Save**. Confirm the new course in the list. Use **Edit** when correcting an existing subject.

Next record	What it connects
Course offering	Course, semester, batch and assigned lecturer.
Timetable	Offering, classroom, day and time.
Enrolment	Student and course offering.

Missing reference options

If a required department, building or semester is missing from a selector, ask the maintainer to prepare the prerequisite record before proceeding.

ACADEMIC SETUP | 2 OF 4

Assign the course offering

Connect the subject to a semester, batch and lecturer.

The form is titled "Add course offering" and contains several input fields. It is organized into two columns. The left column contains "Course" (dropdown menu showing "CS1011 · Image Processing"), "Lecturer" (dropdown menu showing "Dulani Meedeniya"), "Course type" (text input showing "lecture"), and "Status" (dropdown menu showing "Active"). The right column contains "Semester" (dropdown menu showing "Semester 1 (2026)"), "Batch year" (text input showing "2026"), and "Attendance threshold (%)" (text input showing "80"). At the bottom right of the form are two buttons: "Cancel" and "Save".

Figure 5. Add course offering form.

1. Open Course offerings

From Academic data, select **Course offerings** and add an offering.

2. Select its delivery details

Choose the course, semester and assigned lecturer. Enter the batch year and course type.

3. Set the attendance threshold

Enter the percentage required for the course and choose the intended status. Select **Save**, then verify the row.

Threshold and assignment

The threshold is used in attendance reporting. The lecturer assignment controls who can manage the offering. Check both before students begin testing.

An offering alone does not provide a session timetable or an enrolled roster. Complete the next two setup pages.

ACADEMIC SETUP | 3 OF 4

Prepare the timetable

Provide an active classroom slot for the assigned lecturer.

The form is titled "Add timetable entry" and contains several input fields for scheduling a class. It includes dropdown menus for "Offering" (CS1011 - Semester 1 (2026)), "Classroom" (19-first lane), "Day" (Monday), and "Status" (Active). It also has text boxes for "Course type" (lecture), "Start time" (09:00 AM), "End time" (10:00 AM), "Valid from" (10/03/2026), and "Valid until" (mm/dd/yyyy). There are "Cancel" and "Save" buttons at the bottom right.

Figure 6. Add timetable entry form.

Verify the schedule

The end must follow the start and the valid date range must cover the class. Confirm the room and local times before saving.

Use **Edit** for supported corrections. **Deactivate** removes an entry from active scheduling; confirm the intended row before applying it.

1. Open Timetable

Select **Timetable** in Academic data, then add an entry.

2. Link the correct records

Choose the course offering, classroom, day and course type. Set the start and end times.

3. Check dates and save

Set the valid date range and Active status.

Select **Save**. Ask the lecturer to check the slot in Courses and Create session.

ACADEMIC SETUP | 4 OF 4

Enrol students and verify

An account alone does not place the student on a course roster.

The image shows a web form titled "Enrol student" with a close button (X) in the top right corner. The form contains two dropdown menus: "Offering" and "Student". The "Offering" dropdown is currently set to "CS1011 · Semester 1 (2026)". The "Student" dropdown is currently set to "230001J - TestStd SW01". Below the dropdowns are two buttons: "Cancel" and "Save".

Offering	Student
CS1011 · Semester 1 (2026) ▼	230001J - TestStd SW01 ▼

Cancel Save

Figure 7. Enrol student form.

- 1 Open Enrolments**
Select **Enrolments** in Academic data and open the enrolment form.
- 2 Choose the offering and student**
Check the semester, batch and student identifier. Save the enrolment and repeat for the intended roster.
- 3 Confirm the lecturer view**
Ask the assigned lecturer to confirm the course, timetable and enrolled students.
- 4 Confirm the student view**
Ask the student to sign in on the mobile app and confirm the course. The active session appears after the lecturer creates and activates it.

Removing an enrolment

Use **Drop enrolment** only for an authorized correction. Confirm the student and offering because the change affects course access and attendance rosters.

FACE SETUP

Enrol reference faces

Prepare a usable reference profile before enabling face attendance for a student.

1 Prepare the approved photo folder

Use clear JPEG or PNG images with one visible face. Name each file with the matching student registration number, for example **230XXXX.jpg**.

Enrol reference faces

Photo folder

No folder selected

Choose folder

Run enrolment

Select a folder containing JPEG or PNG images named with student registration numbers (for example, 230XXXX.jpg).

Figure 8. Folder selection and Run enrolment controls.

2 Upload through Face enrolment

Open **Users > Face enrolment**. Select **Choose folder**, pick the prepared folder and select **Run enrolment**.

3 Read every result

Review enrolled, unchanged, skipped and failed counts. Investigate failures; processing a folder does not mean every student has a usable profile.

4 Confirm readiness

Check the reference-face table and ask the student to run the readiness trial when available. A readiness pass does not mark attendance.

Limits and existing profiles

The form accepts 1-500 images, up to 5 MB per file and 250 MB per batch, with unique filenames. Existing profiles can be unchanged. Contact the maintainer for a required replacement or revoked profile.

ATTENDANCE SETTINGS

Set attendance policies

Use institution-approved values and verify newly created sessions afterward.

Default attendance and verification policy

Check-in window (minutes)

30

Time allowed for initial face and location verification.

Late threshold (minutes)

15

Cannot exceed the check-in window.

Face confidence threshold (%)

50

Submissions below this percentage enter the review queue.

Default QR validity (minutes)

5

Used when a lecturer does not set a QR validity explicitly.

Save changes

Figure 9. Default attendance and verification policy form.

Field	Purpose
Check-in window	Minutes allowed for initial verification.
Late threshold	Minutes after the start at which check-in is late; cannot exceed the window.
Default QR validity	Used when the lecturer leaves the QR duration blank.
Face confidence threshold	Displayed default face policy; it does not enrol missing face profiles.

Open **Policies**, enter the approved values and select **Save changes**. Confirm the success message.

Changes and availability

Do not assume settings copied into existing sessions change. If face attendance is disabled by deployment configuration, ask the maintainer to confirm availability before scheduling it.

OVERSIGHT

Corrections, reports and audit

Maintain the source data and keep decisions traceable.

Handle academic correction requests

- 1 Review the request**
Open **Corrections**. Filter by status and select Review. Read the lecturer, target, category and description.
- 2 Correct the source record**
If valid, make the supported change in **Academic data**. A request decision does not edit the academic record automatically.
- 3 Save the decision**
Choose the available decision and add a note. A note is required for rejection. Use **Save decision**; mark Resolved only after the actual correction is complete.

Attendance corrections

Academic requests concern offerings and timetables. Attendance results are reviewed by the authorized lecturer through the session roster or Verification review.

Reports

Open **Reports** for institution attendance, completed sessions, trends, course/faculty summaries and students below attendance thresholds. Interpret final attendance using completed-session evidence.

Audit log

Open **Audit log** and use the available actor and action filters. Compare an event with the related user, session or academic record when investigating a change.

Share records carefully

Use approved channels for reference photos, credentials and attendance exports. Give support the page, affected record and exact error message.

HELP

Troubleshooting and checklist

Resolve prerequisite data before the attendance demonstration.

Problem	What to check
Access denied / locked	Correct role and account status; ask the identity maintainer about logout or password issues.
Could not load a page	Check internet access and select Try again. Report the page and error if it persists.
Missing lecturer or student	Verify account provisioning, profile and status. Refresh Academic data after changes.
Lecturer has no session slot	Check assigned offering, active timetable and valid date range.
Student cannot see a course	Check the correct offering and an active enrolment.
Location fails for the class	Verify room coordinates and radius. Existing sessions keep their copied boundary.
Face enrolment fails	Check filename/student mapping, image size/type, one clear face and the returned summary.
A correction is still wrong	Edit the actual source record; a request decision alone does not change it.

Class preparation checklist

Active accounts. Verified classroom. Course and offering saved. Lecturer assigned. Timetable active. Students enrolled. Approved reference profiles ready if required. Lecturer and student views checked.
