

START HERE

Lecturer User Guide

Run attendance sessions, display QR checks and review final results.

Your class workflow: **check the timetable > create and activate the session > monitor initial check-in > launch QR checks if enabled > close and review final attendance.**

Before class

You need an active lecturer account, an assigned course offering and active timetable. Students must be enrolled. Face-required sessions also need usable student reference profiles.

In this guide

Task	Page
Sign in, dashboard and assigned courses	2
Create and activate a session	3
Monitor initial check-in	4
Launch static or dynamic QR checks	5
Close, cancel and read final results	6
Correct attendance and review exceptions	7
Geofence waivers, reports and requests	8
Troubleshooting and class checklist	9

Use the clickable contents or PDF bookmarks. Select a page footer to return here.

GET STARTED

Sign in and check your courses

Confirm that the class setup is correct before creating a session.

1

Open the web dashboard

Visit [UniAttend](#) and select **Continue with University account**. Sign in with your assigned credentials.

Figure 1. Lecturer attendance overview.

2

Check Courses

Open **Courses** to confirm your assigned offering, classroom, timetable and enrolled students. Request a correction when these are wrong.

Use the sidebar for **Sessions**, **Verification review** and **Reports**. Point to a sidebar icon to reveal its label if the layout is collapsed.

Overview counts

Initial check-in and final attendance are different. Use the individual session monitor to inspect student results. Sign out through the account menu on a shared computer.

BEFORE CLASS

Create and activate a session

Creating a session saves it; activation opens it for student use.

Create attendance session ×

Timetable slot

MA1040 · Monday 09:00–10:00 · ICE Room ▼

Session title

e.g. Week 6 Lecture

Shown to you and to enrolled students.

Starts **Ends**

10/03/2026 04:50 PM 📅 10/03/2026 05:50 PM 📅

Verification requirements

☒ Require face verification

Geofence check is required for every session.

☒ Enable QR checks during the lecture

Cancel Create session

Figure 2. Creation form with optional face and QR settings selected.

1. Open Sessions

Select **Create session** and choose the correct **Timetable slot**.

2. Set the title and times

Enter a Session title and Starts/Ends. Check the computer's time zone and the intended classroom.

3. Choose the checks

Geofence is required. Enable **Require face verification** and/or **Enable QR checks during the lecture** as appropriate.

4. Save, inspect and activate

Create the session, open its monitor and verify the check-in window and late threshold. Select **Activate session**, then **Activate**.

Default and copied settings

Face starts unchecked and can be disabled by deployment configuration. The classroom boundary is copied into the session; a later classroom edit does not move it.

Confirm the status is In progress and the check-in window is open before asking enrolled students to start attendance.

DURING CLASS

Monitor initial check-in

Watch accepted check-ins and investigate failures while class is active.

Figure 3. Session monitor showing a completed example with one student.

Open a session from **Sessions**. Read the check-in window, late threshold and room, then inspect the roster. Refresh if the display appears stale.

What to inspect	Meaning
Initial check-in	Checked in, Checked in late, Not checked in or Failed verification.
Face and QR	Whether face passed and how many required QR batches the student passed.
Final result and source	The outcome after closure and whether it is Automatic or Manual.

During an active session

Students complete location and any required face check first. Ask them to confirm Checked in on their phone. Final attendance is decided at closure.

QR CHECKS

Launch static or dynamic QR

QR must be enabled and the attendance session must be In progress.

QR launch settings MA1030 · PILOT-01

QR launch unavailable This session is not currently active or QR verification is disabled.

QR mode

Static
One QR value

Dynamic
Auto-rotating QR

QR session duration

Institution default

Leave blank to use the institution default. An explicit duration can be 30 to 86,400 seconds; expiry is capped by the attendance session end time.

Dynamic refresh interval

15

How often the displayed QR should rotate. Backend accepts 1 to 300 seconds.

Launch QR

1. Open QR management

Select **Manage QR batches** on the session monitor.

2. Choose the mode

Static keeps one value. Dynamic rotates the code at the chosen refresh interval.

3. Set the timing

Enter **QR session duration** or leave it blank for the institution default. Set the Dynamic refresh interval when using Dynamic.

4. Launch and display

Select **Launch QR**. Allow browser pop-ups and keep the separate QR display visible for students. Confirm participation afterward.

Figure 4. Dynamic settings. Launch is unavailable in this closed example.

Timing and multiple batches

Explicit duration: 30-86,400 seconds, capped by the attendance end time. Dynamic refresh: 1-300 seconds. Wait for expiry or deactivate the active batch before starting another.

Deactivate is different from void

Deactivate QR stops scanning but keeps the requirement. Void batch excludes it for every student and requires a reason. Check the batch outcome before closing the session.

END OF CLASS

Close and read final results

Closing finalizes a completed class; cancellation does not finalize attendance.

- 1 Review before closing**
Check the roster and required QR participation. Investigate reported issues and any batch that could not be used.
- 2 Close the completed session**
Select **Close session** and confirm. Review the closure summary and final attendance totals.

Face	QR passed / required	Final result	Source	Action
passed	1/1	● Present	Automatic	<button>Change attendance</button>

Figure 5. A student record with face passed, QR 1/1 and final Present.

Automatic result	Evidence at closure
Present / Late	Initial check-in exists; every required QR batch passed, or none were required. Check-in timing determines Present or Late.
Left early	Initial check-in exists; some required QR batches passed, but not all.
Absent	No initial check-in, or required batches exist and none passed.

To cancel a mistaken session

Select Cancel session for a scheduled or active session, provide a 3-500 character reason and confirm. It ends without finalizing attendance.

Voided batches do not count. Existing manual decisions take precedence. Confirm actual closure and final records even when automatic closure is configured. Ask students to refresh attendance progress.

CORRECTIONS

Record a manual decision

Inspect the student and evidence, then record the reason for an exception.

Manual attendance · Manushan Student

230736R · Choose the final result and record why it was set manually.

Current result: **Present** (automatic)

Final attendance

Present

Reason

Required, 3-500 characters.

Cancel Save attendance

Figure 6. Manual attendance correction form.

1. Find the student

In the session roster, select **Set attendance** or **Change attendance**. Check the registration number and current result.

2. Choose the outcome

Choose Present, Late or Absent. Enter a specific reason, 3-500 characters. Left early is an automatic outcome, not a manual option.

3. Save and verify

Select **Save attendance**. Confirm the final result, Manual source and reason in the roster.

Verification review

Open **Verification review** for failed or exceptional attempts. Read the evidence. Use Approve with Present or Late, or Reject for Absent. Provide the required reason and confirm, then inspect the session record.

Use corrections deliberately

A manual record overrides automatic finalization. Explain the verified problem clearly rather than using a generic note.

FOLLOW-UP

Waivers, reports and requests

Use justified exceptions and review the completed-class evidence.

A session geofence waiver

During an active session, use **Waive Geofence Requirement** only for a valid class-wide problem. Select the reason, add the requested details and select **Confirm Waiver**. Other required checks still apply.

Waiver scope

This applies to the entire session. For one student's problem, review that student's evidence and use a reasoned attendance correction.

Reports and CSV export

Open **Reports** for completed-session statistics, course trends and students below attendance thresholds. Use **Export at-risk list** for the available CSV export. Keep downloaded student records in approved storage.

Figure 7. Course attendance comparison in Reports.

Academic correction requests

On **Courses**, use the offering or timetable correction-request controls. Choose the affected target, category and details, then submit. Track its status in the correction-request card. Administration must update the source data; a request does not edit it immediately.

HELP

Troubleshooting and checklist

Resolve problems while the session can still be reviewed.

Problem	What to do
Sign-in / access failure	Confirm the assigned role and active account. Ask administration for account help.
Page cannot load	Check connectivity and select Try again. Report the page and exact error if it persists.
No timetable slot	Ask administration to verify your offering assignment, active timetable and date range.
Students cannot check in	Check activation, check-in window and enrolment. Inspect the student's error message.
Face attendance not enabled	Ask the maintainer to confirm the deployment configuration and reference profiles.
QR window blocked	Allow pop-ups for UniAttend, then launch again.
Another batch is active	Wait for expiry or deactivate it before launching the next batch.
Dynamic QR stops updating	Check connectivity and the stream error. Investigate before keeping an unusable batch as a requirement.
Final result differs from check-in	Review required QR passes and closure. Record a justified manual correction when appropriate.

Class checklist

Correct slot and times. Required checks selected. Session activated. Initial check-ins observed. Every QR batch reviewed. Session closed. Final results verified.
