Student User Guide

Use the Android app to complete attendance and view your results.

Your attendance journey: **open the session > verify location > complete face checks if required > scan required QR batches > check the final result.**

Before class

You need an active student account, enrolment in the course, an internet connection and a phone at the classroom. Turn on precise location; allow camera access for face and QR checks.

In this guide

Task	Page
Install, sign in and find your class	2
Start check-in and verify location	3
Complete face verification	4
Confirm initial check-in	5
Scan required QR checks	6
Read your final attendance	7
Courses, notifications and profile	8
Troubleshooting and quick checklist	9

GET STARTED

Sign in and find your class

The Home screen shows the sessions available to your enrolled account.

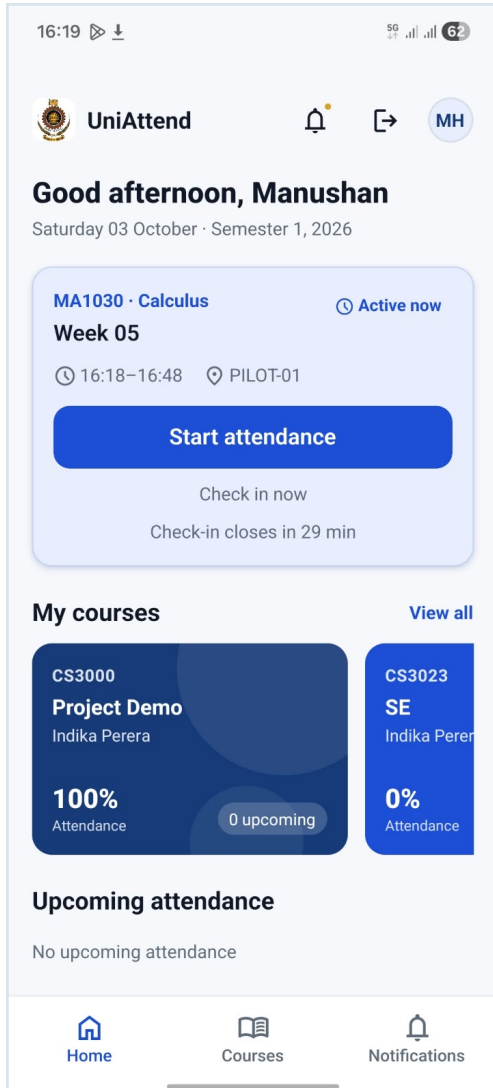

Figure 1. Home with an active attendance session.

Install the Android app

Download and install the supplied APK from [the EAS build page](#). Use the build approved by your project administrator.

Sign in

Open UniAttend and enter your university credentials. Complete any password-change prompt. Ask administration if you need an account or password help.

Find the correct session

On Home, check the course, session title and room. Select **Start attendance**. A session must be activated by the lecturer before check-in is available.

Check your permissions

Allow precise location, camera and notifications when prompted. Phone alerts help you notice QR checks during class.

If a course or session is missing

Confirm the account, course enrolment and lecturer activation. Reopen the app or refresh after a correction.

INITIAL CHECK-IN

Verify your classroom location

Be in the classroom and complete the initial steps within the check-in window.

- 1

Read the session details

Check the title, date/time and check-in window, then select **Start Check-In**.
- 2

Allow a precise location reading

Keep Android Location on and wait for **Inside classroom area**. If face is required, select **Continue to Face Verification**.

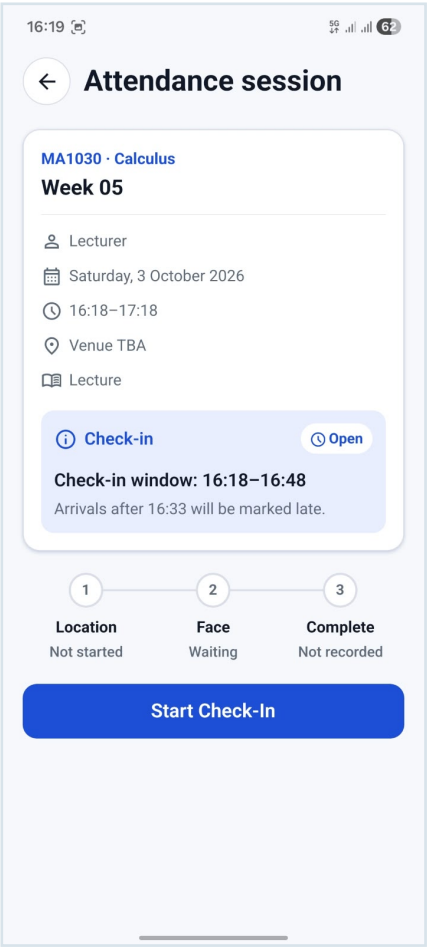

Figure 2. Session details and Start Check-In.

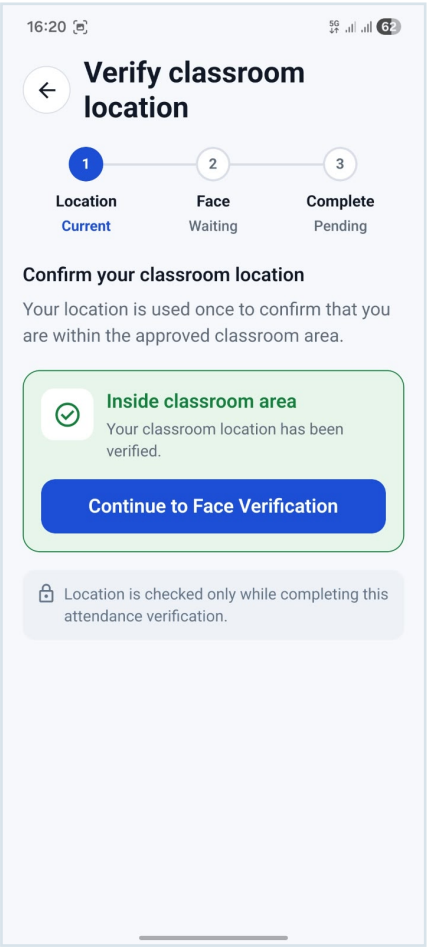

Figure 3. Location accepted.

If location fails

For low accuracy, move near a window or a clearer view of the sky and retry. For outside-area results, verify the room with your lecturer. Simulated location is rejected.

FACE CHECKS

Complete face verification

This stage appears when the session requires face verification.

- 1 Read the guidance**
Use front lighting, center one face and hold the phone at eye level. Select **Begin Verification**.
- 2 Follow the two camera prompts**
Complete the displayed head-turn or eyes-closed actions, then face forward and keep still for the final capture.

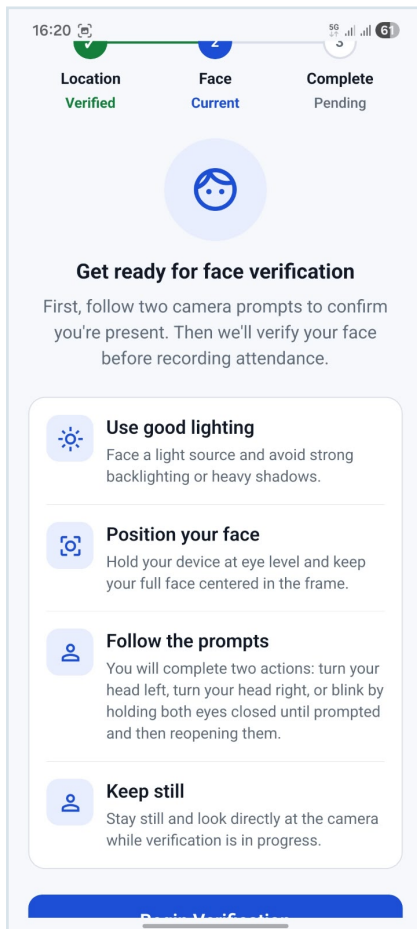

Figure 4. Lighting and positioning guidance.

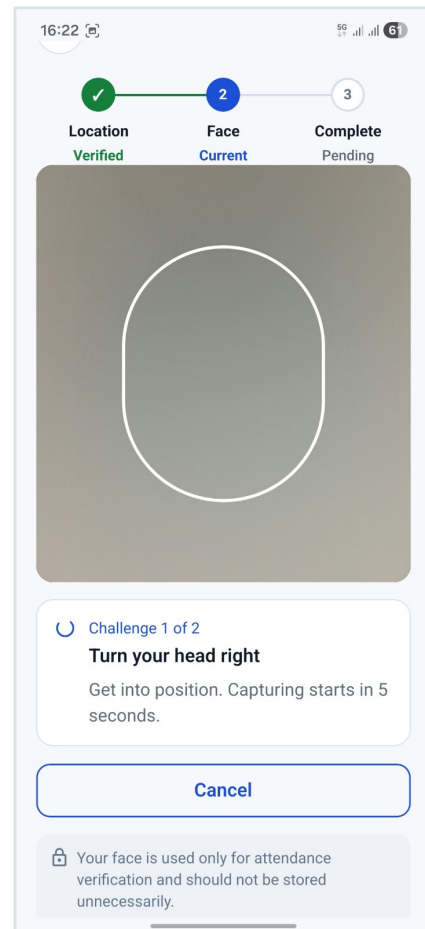

Figure 5. An example liveness prompt.

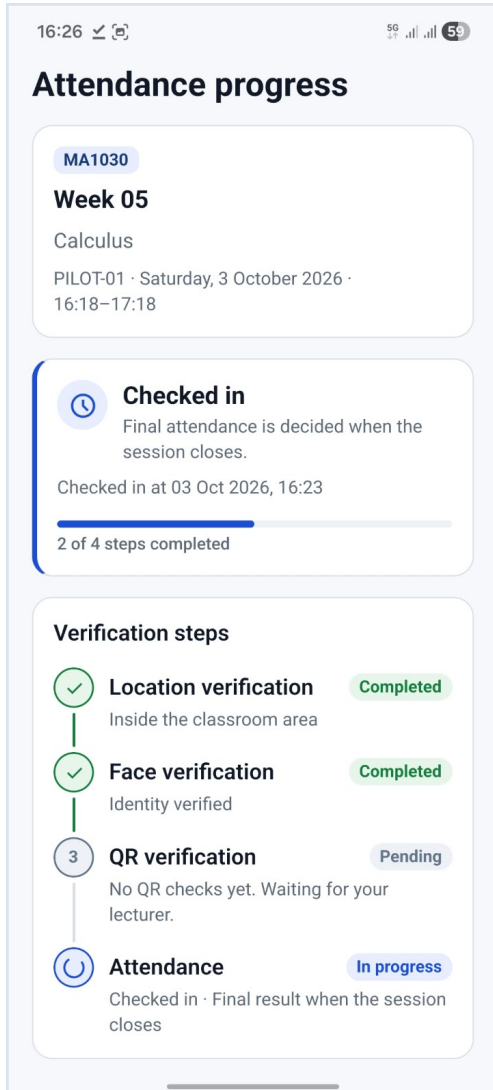

Face matching needs enrolment

Your administrator must enroll an approved reference photo first. If no face can be verified, use Try Again after adjusting your position, or report the problem to the lecturer.

INITIAL RESULT

Confirm that you are checked in

Initial check-in and final attendance are different stages.

Check the progress screen

After successful face verification, use **Continue** if shown. Confirm the required location and face steps show **Completed**.

Read the initial result

Checked in or **Late checked in** means the initial requirements passed. It does not yet guarantee final Present.

Stay ready for QR checks

QR can be pending until the lecturer launches a batch. Keep attending the class and scan each required check when it opens.

Readiness is separate

If Home offers **Check Face Verification Readiness**, use it before class. A readiness pass checks the reference profile; it does not mark session attendance.

Figure 6. Location and face completed; QR is pending.

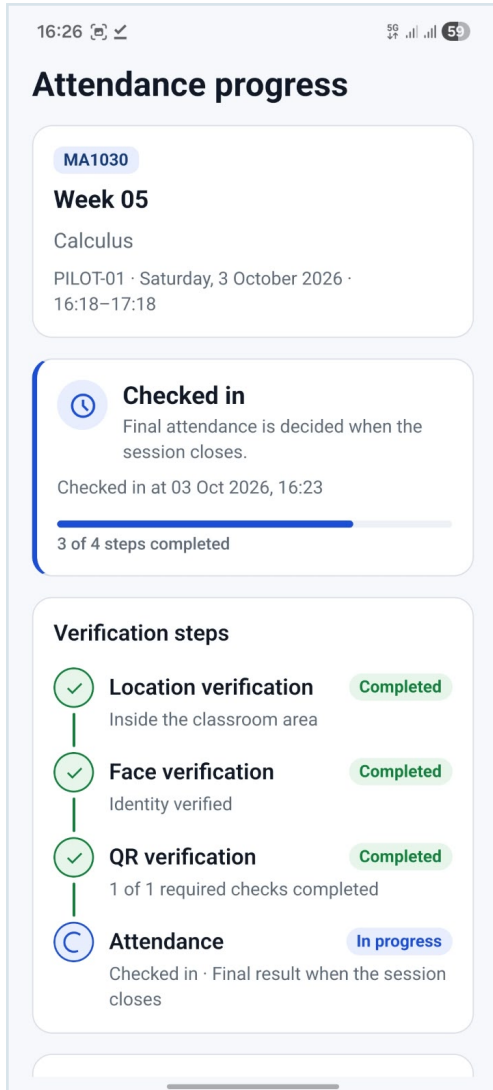

When face is optional

A session without face verification skips that requirement. Still confirm the initial result after location verification.

DURING CLASS

Scan the lecturer's QR checks

Each required QR batch must be passed while it is active.

Open the active check

From the session's attendance progress, select **Scan QR** when the lecturer opens a batch.

Scan the current display

Point UniAttend's scanner at the lecturer's QR. Static codes stay the same until expiry; dynamic codes change regularly.

Confirm the pass

Wait for acceptance and check the required-batch count. One accepted batch does not cover a later batch.

If the code expires

Scan the current displayed code again while the batch remains open. An old screenshot of a dynamic code may be invalid.

Figure 7. One required QR check completed; attendance is still in progress.

After a successful scan

You remain checked in until the session closes. Reading a QR notification does not count as scanning the code.

AFTER CLASS

Read your final attendance

Refresh or reopen the session after the lecturer closes it.

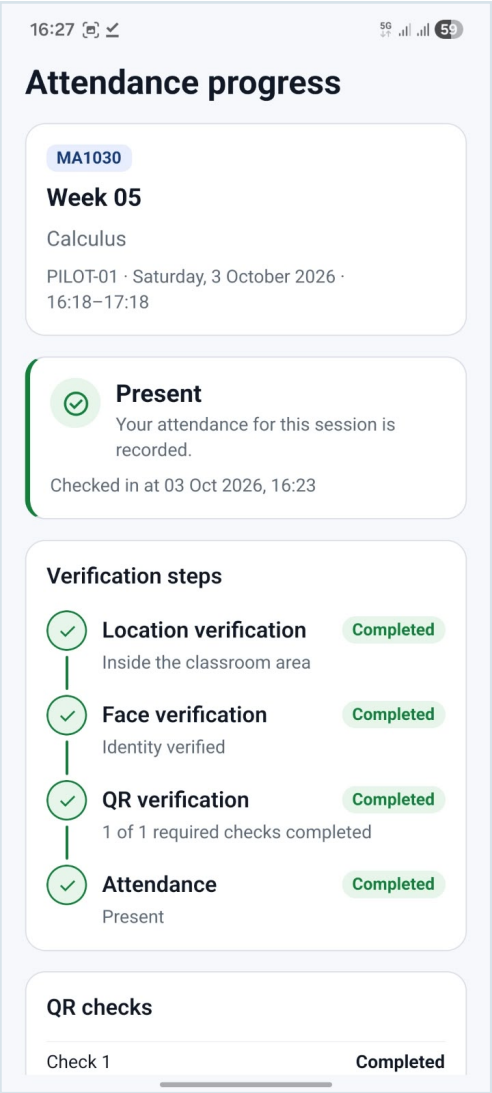

Figure 8. Final Present with the required steps completed.

Present or Late

Initial check-in exists and all required QR batches passed, or no required batches were launched. The check-in time determines on-time or late.

Left early

Initial check-in exists, but only some of the required QR batches passed.

Absent

Initial check-in is missing; or required QR batches exist and none passed.

Ask for review if needed

If a valid phone or verification problem affected your result, tell the lecturer. Authorized manual decisions are recorded with a reason.

Exceptions

Voided QR batches do not count toward the required checks. An existing manual attendance decision takes precedence over the automatic outcome.

EVERYDAY USE

Courses, notifications and profile

Use the app tabs to follow your own records and class activity.

Courses

Open **Courses** and select an enrolled course. Review sessions, attendance statistics and the attendance record. Open a session to see verification progress and its final outcome. Report missing or incorrect enrolments to your lecturer or administrator.

Notifications

- 1 Read the inbox**
Open **Notifications**. Filter by All, Attendance or System. Open an item and follow its session link where available.
- 2 Manage unread items**
Use **Mark all as read** and **Load more** as needed. Reading an alert does not complete attendance.
- 3 Check phone alerts**
The push status shows whether the device is registered. If permission is off, enable UniAttend notifications in Android settings and select Retry.
- 4 Set preferences**
Open **Profile > Notification preferences**. Set In-app and Push for the displayed types, then select Save.

Inbox and phone alerts

Push also depends on the institution's delivery configuration. If no alert arrives, check the active session directly.

Profile and sign-out

Use Profile to verify your university email and registration details. Contact administration for corrections. Use **Sign out** to change accounts or finish on a shared device.

HELP

Troubleshooting and quick checklist

Report problems while the lecturer can still review the session.

Problem	What to do
No active session	Confirm enrolment and ask whether the lecturer activated the session.
Check-in unavailable	Read the check-in window and session status. Verify time and session with the lecturer.
Location rejected	Allow precise location, improve the reading and confirm the room.
Camera / face failure	Allow camera access, use good lighting, keep one face visible and follow the prompts. Ask administration to check the face profile if needed.
QR rejected	Scan the current display during the active batch and confirm initial check-in.
Session expired	Sign out and sign in again.
Inbox will not load	Check the connection and use Retry.
Unexpected final result	Review required QR passes and ask the lecturer to inspect a valid exception.

Your attendance checklist

Open the right session. Pass the initial checks. Confirm Checked in. Scan every required batch. Reopen the session after closure and check the final result.

For support, provide the course, session title, time and exact error message. Keep credentials and access tokens private.
